DEEP-SKY PLANNER 4 RELEASED

Deep-Sky Planner 4, Observation Planning & Logging Software for

Astronomers was released today. The product operates on Windows 98 SE, ME, 2000, XP and later. Version 4 is a complete revision of the previous version, published in 1998 by Sky Publishing Corporation. The product retails for \$54.95 and is backed by a 30-day money back guarantee when purchased from Knightware.

The product allows users to plan observing time by searching and reporting on nearly 300,000 deep-sky objects using customizable filtering and sorting options, or calculate astronomical darkness, planetary positions and times of special events like the recent opposition of Mars. The integrated observing log holds photographic and visual observations that may be searched and reported using customizable filtering and sorting options.

The observation planning and logging features are the focus of the software so it provides a straightforward solution to this basic necessity of astronomers while offering the power and accuracy users expect.
